Screen Saver Control

Screen Saver Control is a handy and intuitive tool for adjusting all settings related to the screensaver activation and monitor power off. As its name suggests, the utility works to modify all the settings for the screensaver activation as well as monitor power off. With the help of Screen Saver Control you can seamlessly set up configuration details for the screensaver activation and monitor power-off. After a brief and uneventful setup procedure, you are welcomed by a standard window with a well-organized layout, representing Screen Saver Control's interface. Deactivating the screensaver or restoring its status is done with the simple click of a button, and this rule applies to powering off the monitor as well. Furthermore, you can establish hotkeys for triggering these two actions. As far as program settings go, you can restore the initial configuration on exit, update Windows configuration, preserve the selected configuration, use continuous mode and establish the activation timeout, as well as make the tool run at system startup automatically. In addition, you can set the single-click and double-click action for the taskbar icon (e.g. show application window, activate managed items), access the Windows display properties area, deactivate managed items for a specific time frame (ranging from a half an hour to 12 hours), as well as restore settings to their default values. Screen Saver Control is very low-demanding when it comes to the CPU and RAM, therefore it doesn't burden the computer's overall performance. No error dialogs have been shown throughout our evaluation, and the utility did not freeze or crash.

Technical characteristics: The program runs on Windows Vista and later versions, providing a possibility to modify the screensaver activation and monitor power off options on any workstation. Screen Saver Control also works on Windows XP, but only if the system is configured to use a screensaver. It doesn't restrict to one particular screen resolution, however, the program works best with 1024x768 pixels, but it will offer the users to use alternative resolution as well. In case the program fails to detect any active screen, it allows you to set it up again. The installation process is simple and quick. All you need to do is unpack the package file into any directory, run Screen Saver Control setup executable, allow the wizard to configure the program settings and run it for the first time. The list of program's features: 1. Set up the screensaver activation 2. Set up the monitor power off
