I would like to convert my data to a format that is suitable for SMART Business, so that I can enter the data into a.Development of a robust contact tissue expansion technique for acquired unilateral cleft lip deformities. Using a straightforward step-by-step protocol, we have developed a technique for creating a reliable "tissue expansion set-up" using very simple non-autosuture instruments and silicone tubing. This technique has allowed us to create a reliable free postero-laterally-based flap in a single-step surgery and eliminate all the previous problems associated with the technique. We have also validated the usefulness of the technique in more than 60 patients. (10 g body weight) under the anaesthesia of sodium pentobarbitone (60 mg/kg b.wt. i.p.). The ventral skin was cleaned with a solution of 70% ethanol for at least 2 min followed by washing with normal saline. About 0.5 cm² excisional defect was made on the dorsum of animals and defects were closed using this flap. In order to harvest tissue for immunohistochemistry, the animals were sacrificed after three and six weeks. The skin was harvested and stained with haematoxylin and eosin for microscopic study. Experimental protocol {#Sec10} ----- Mice (n = 7) were divided into three groups: Normal group (n = 7) which had only solvent (ethanol) applied on the lateral aspects of the abdomen, while the other two groups had received injections of 10⁷ cfu of *L. lactis* or *L. lactis-NisC* on the lateral aspects of the abdomen. The
